# LettError's NEWSLTR#18 Quick Logo

After drawing this sketch I was curious how the shapes would work as vectors. It is a lot of detail and the the 1000 UPM does not leave much material to work with. But as an exercise in reasonable compromises it did just fine.

This is a font, but it is not a typeface. Each letter has a part of the logo. By typing you could rearrange the parts.

Maybe that crowbar motif will feature in a more complete character set. Maybe.
